Deliver AI, web, and mobile projects with client management, leading developers to build user-focused technical solutions.

## PROJECTS

### AI-Powered Lost & Found Items System (FYP project)

AI-Powered Lost & Found System is a cross-platform app using AI-based image and text matching for efficient item search and recovery. It features user-friendly reporting and searching, with an admin dashboard for easy management, and recovery rates.

### Hostel Complaints Management System

Developed a MERN-based Complaint Management System for a client as a Final Year Project, enabling students to submit and track complaints and staff to manage and resolve issues. The web system is completed, with AI integration in progress.

15/09/2024 – 23/04/2025

### Online Vehicle FIR Verification System

Built a secure and user friendly web app using the MERN stack, allowing users to verify vehicle FIR status with real-time search, history view, and map location including role based login and a user friendly admin dashboard.

### AI Based Solar Advisory System

Developed an AI-based solar advisory system as part of a Machine Learning semester project, where users enter their location and electricity usage, and the system provides solar recommendations based on real-time data and AI analysis.
